---

Here is Jim Erickson's response to our (his and my) discussion yesterday regarding my concerns over the new procedure for abandoning ISGS injection borings.

Kelsey - did you make contact with Jim yesterday? Does FDEP want to hold a conference call Monday? We (GRU and ACEPD) have discussed the matter and there is no point having a call if FDEP sees no need. If you do want to discuss the issue, I suggest that we have a conference call among ourselves Monday with EPA (Bill O'Steen if possible) and TetraTech/Beazer if they would like to participate.

John Herbert

Scott, I spoke to John this morning. Since I spoke to John, Mike Scalzi (IET) developed this document for IET's approach to establishing volume of bentonite for sealing borehole and depth to push bentonite with drill rods. I'm good with their calculations and approach. I do not think we need a group call to discuss. Jim
