VIA EMAIL

Subject: April 2012 Monthly Progress Report

Dear Mr. Miller:

On behalf of Beazer East, Inc. (Beazer), attached is the April 2012 Monthly Progress Report for the Cabot Carbon/Koppers Superfund Site in Gainesville, Florida, as required by 1991 Unilateral Administrative Order (UAO) and the 1994 UAO Amendment. If you have any questions or comments, please contact me.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Gregory W. Council'.

Gregory W. Council, P.E.
Principal Engineer

cc: Kelsey Helton, FDEP
John Mousa, ACEPD
Rick Hutton, GRU

Guy Roemer, Tetra Tech GEO

April 2012
MONTHLY PROGRESS REPORT
Cabot Carbon/Koppers Superfund Site
Gainesville, Florida

1. Description of actions taken to comply with the Unilateral Administrative Order (March 1991) and estimate of the percentage of the RD/RA completed:

- Beazer's Operation and Maintenance (O&M) Contractor performed routine treatment plant operation and maintenance services for the ground water remedial system.
- A new Record of Decision (ROD) was issued in February 2011. RD/RA activities are presently being planned and scheduled.

2. Summary of results of sampling and tests and all other data during the month:

- Instantaneous flow rates and totalizer volumes were measured in each extraction well.
- Passive NAPL recovery continues: 4.15 gallons of NAPL were bailed from Upper Hawthorn wells during the past month (2 recovery events). A total of 489.06 gallons have been bailed since the start of the NAPL recovery program on June 19, 2004. The two-week recovery schedule was started October 25, 2005. The attached table provides details of the NAPL recovery volumes by well and date.
- A total of 2,946,281 gallons of ground water were recovered by the Surficial Aquifer drains and extraction well system during the past month (system run time of 744 hours). The water was treated and discharged to Gainesville Regional Utilities (GRU). The average recovery rate for the month was approximately 66.0 gallons per minute (gpm). The recovery rate for each component is listed below.
 - Perimeter Extraction Wells: 359,628 gallons
 - FW-6: 23,271 gallons
 - FW-21B: 118,294 gallons
 - FW-31BE: 907,110 gallons
 - FW-32BE: 446,898 gallons
 - Former North Lagoon Drain: 0 gallons
 - Former Drip Track Drain: 245,610 gallons
 - Former Process Area Drain: 424,740 gallons
 - Former South Lagoon Drain: 420,730 gallons

Approximately 275,510,000 gallons have been recovered from the Surficial Aquifer extraction wells and four drains since the start of the Surficial Aquifer containment system in January 1995.

3. Summary of all plans, reports, deliverables and procedures completed:

- Completed monthly maintenance check.
- Inspected piezometers, extraction wells, piping, valves, treatment plant vessels and controls, buildings and grounds.
- Drained and cleaned clarifier and treated backwash water at Former South Lagoon and Process Area Drains.
- Performed carbon breakthrough sampling for SVOC's and total As.
- Performed Floridan influent total and dissolved Fe sampling for irrigation re-use application.
- Conducted 2 month post startup sampling at wells FW-32BE and FW-16B.
- Replaced EW-9 and EW-13 jet pumps.
- Replaced gauges on South Lagoon Drain and pulled FP drain pump for air locking and reset.
- Pulled, cleaned, and re-built FW-6 booster pump and EW-8 pump.
- Disposed of 57 drums of PPE, spent filters, plastic, treatment sludge, spent carbon, and hazardous soil.

4. Projected work for the next month (May 2012) with schedule considerations:

- Measure instantaneous flow rates and totalizer volumes for each extraction well.
- Continue NAPL removal from Hawthorn Group wells on a two-week schedule.
- The 2011 Second Semiannual Comprehensive Groundwater Monitoring Report will be submitted.
- Bids and cost refinement are being conducted for the ISGS (in-situ geochemical stabilization) implementation.
- A statement of work for remedial design and remedial action is presently in preparation; a full Site project schedule is being developed as part of this effort.

5. Summary of problems or potential problems and actual or anticipated delays encountered during the month:

- The North Lagoon Drain recovered zero (0) gallons for the month because the water level elevation in the Surficial aquifer is below the level of the pump intake. Former Drip Track Drain pumping rate continues to decline. Water levels are low site wide as a result of low rainfall. All drain pumps set at lowest possible position in sump.

6. Actions being taken to rectify problems or delays:

- None this reporting period.

7. Supplemental information:

- Once the project schedule has been updated to reflect RD activities, it will be included in future progress reports.

8. Changes in personnel during this month:

- None this reporting period.

Notes:
 6/19/04 measured with bailer
 7/07/04 measured with weighted cotton string
 Other dates used Bailer & Interface Probe
 ND indicates NAPL not detected
 NM indicates measurement not taken
 Stain indicates that NAPL stained measurement probe, but thickness was unmeasurable
 Blank indicated no measured DNAPL removal
 10/25/05 began two-week schedule
 5/17/06 used low-flow pump (as opposed to the bailer)
 7/10/07 RH performed bailing
 11/13/07 New Heron Oil/Water Interface Probe (H01L/SM01L) now in use
 3/4/08 through 8/25/08 Key Environmental pumping well running 8 ft away from HG-10S and HG-10D
 12/23/08 Michael Toundas performed DNAPL recovery
 2/3/2009 difficulties with obtaining DNAPL/water interface with new tape
 3/18/09 - only performed DNAPL recovery at HG-15S
 starting on 8/20/09 - used peristaltic pump at HG-11S & HG-15S; stain observed at HG-16D and M-22B
 10/21/2009 - FW-6 no longer measured due to Upper Floridan IRM
