VIA EMAIL

Subject: February 2012 Monthly Progress Report

Dear Mr. Miller:

On behalf of Beazer East, Inc. (Beazer), attached is the February 2012 Monthly Progress Report for the Cabot Carbon/Koppers Superfund Site in Gainesville, Florida, as required by 1991 Unilateral Administrative Order (UAO) and the 1994 UAO Amendment. If you have any questions or comments, please contact me.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Gregory W. Council'.

Gregory W. Council, P.E.
Principal Engineer

Guy Roemer, Tetra Tech GEO

February 2012
MONTHLY PROGRESS REPORT
Cabot Carbon/Koppers Superfund Site
Gainesville, Florida

1. Description of actions taken to comply with the Unilateral Administrative Order (March 1991) and estimate of the percentage of the RD/RA completed:

- Beazer's Operation and Maintenance (O&M) Contractor performed routine treatment plant operation and maintenance services for the ground water remedial system.
- A new Record of Decision (ROD) was issued in February 2011. RD/RA activities are presently being planned and scheduled.

2. Summary of results of sampling and tests and all other data during the month:

- Instantaneous flow rates and totalizer volumes were measured in each extraction well.
- Passive NAPL recovery continues: 6.5 gallons of NAPL were bailed from Upper Hawthorn wells during the past month (3 recovery events). A total of 481.01 gallons have been bailed since the start of the NAPL recovery program on June 19, 2004. The two-week recovery schedule was started October 25, 2005. The attached table provides details of the NAPL recovery volumes by well and date.
- A total of 1,780,563 gallons of ground water were recovered by the Surficial Aquifer drains and extraction well system during the past month (system run time of 576 hours). The water was treated and discharged to Gainesville Regional Utilities (GRU). The average recovery rate for the month was approximately 51.5 gallons per minute (gpm). The recovery rate for each component is listed below.
 - Perimeter Extraction Wells: 335,849 gallons
 - FW-6: 18,724 gallons
 - FW-21B: 38,870 gallons
 - FW-31BE: 313,240 gallons
 - Former North Lagoon Drain: 0 gallons
 - Former Drip Track Drain: 212,900 gallons
 - Former Process Area Drain: 388,860 gallons
 - Former South Lagoon Drain: 472,120 gallons

Approximately 272,800,000 gallons have been recovered from the Surficial Aquifer extraction wells and four drains since the start of the Surficial Aquifer containment system in January 1995.

3. Summary of all plans, reports, deliverables and procedures completed:

- Completed monthly maintenance check.

- Inspected piezometers, extraction wells, piping, valves, treatment plant vessels and controls, buildings and grounds.
- Drained and cleaned clarifier and treated backwater water at Former South Lagoon and Process Area Drains.
- EW wells, Drip Track Drain, and FW-6 shut off for 5 days to install extraction well FW-32BE.
- Extraction well FW-31BE and monitoring well FW-21B were shut off for approximately 230 and 355 hours, respectively, due to installation of extraction well FW-32BE.
- Conducted carbon breakthrough sampling on February 22, 2012.
- Completed extraction well FW-32BE installation.
- Conducted FW-32BE baseline sampling event at wells FW-16B and FW-32BE.
- Conducted 1 week post startup sampling at extraction well FW-32BE.
- Replaced EW-8 pump and EW-13 jet pump.
- Replaced drive belt and pressure gauge and changed compressor oil at FW-6.
- Disposed of 212 drums of PPE spent filters, and plastic; DNAPL and water; groundwater treatment sludge, and soil.

4. Projected work for the next month (March 2012) with schedule considerations:

- Measure instantaneous flow rates and totalizer volumes for each extraction well.
- Continue NAPL removal from Hawthorn Group wells on a two-week schedule.
- Perform extraction well FW-32BE aquifer test.
- A statement of work for remedial design and remedial action is presently in preparation; a full Site project schedule is being developed as part of this effort.

5. Summary of problems or potential problems and actual or anticipated delays encountered during the month:

- The North Lagoon Drain recovered zero (0) gallons for the month because the water level elevation in the Surficial aquifer is below the level of the pump intake. Water levels are low site wide as a result of low rainfall.

6. Actions being taken to rectify problems or delays:

- None this reporting period.

7. Supplemental information:

- None this reporting period. Once the project schedule has been updated to reflect RD activities, it will be included in future progress reports.

8. Changes in personnel during this month:

- None this reporting period.

Notes:

- 6/19/04 measured with bailer
- 7/07/04 measured with weighted cotton string
- Other dates used Bailer & Interface Probe
- ND indicates NAPL not detected
- NM indicates measurement not taken
- Stain indicates that NAPL stained measurement probe, but thickness was unmeasurable
- Blank indicated no measured DNAPL removal
- 10/25/05 began two-week schedule
- 5/17/06 used low-flow pump (as opposed to the bailer)
- 7/10/07 RH performed bailing
- 11/13/07 New Heron Oil/Water Interface Probe (H01L/SM01L) now in use
- 3/4/08 through 8/25/08 Key Environmental pumping well running 8 ft away from HG-10S and HG-10D
- 12/23/08 Michael Toundas performed DNAPL recovery
- 2/3/2009 difficulties with obtaining DNAPL/water interface with new tape
- 3/18/09 - only performed DNAPL recovery at HG-15S
- starting on 8/20/09 - used peristaltic pump at HG-11S & HG-15S; stain observed at HG-16D and M-22B
- 10/21/2009 - FW-6 no longer measured due to Upper Floridan IRM
