**April 2019 Monthly Progress Report  
Cabot Portion of Cabot/Koppers Superfund Site, Gainesville, FL**

**Data Inventory**

No additional samples were collected during the month of April.

**Data Reporting**

The Cabot remedial interceptor trench discharge pump station monitoring report for the first quarter of 2019 was submitted to Gainesville Regional Utilities (GRU) during the week of April 22. Table 1 shows the volume of groundwater collected and treated during the first quarter.

**Table 1 Groundwater Collected and Discharged to GRU**

<b>Time Period</b>	<b>Volume of Groundwater (million gallons)</b>
January 2019	3.15
February 2019	2.87
March 2019	2.64
First Quarter Total	8.66

Note: Daily and monthly discharge volumes are reported to GRU quarterly.

**Upcoming Action Items**

US EPA approved the 100% Remedial Design report with the exception of the Operations, Maintenance, and Monitoring Plan, for which stakeholder input/comment is pending.

Modifications to the remedial design associated with property access issues were completed in April and shared with US EPA and other stakeholders. Procurement of construction services for remedial action implementation has been initiated and will continue in May. The delays associated with the design modification have impacted the overall remedy procurement and implementation schedule. An updated schedule will be provided in May.

The routine semi-annual groundwater monitoring event at the Site is scheduled for the week of May 13 to 17, 2019.
