Project: 14-0430, Cabot Carbon/Koppers - Reported by Jeffrey Hendel

November 21, 2014

**MEMORANDUM**

**SUBJECT:** FINAL Analytical Report  
Project: 14-0430, Cabot Carbon/Koppers  
Superfund Remedial

**FROM:** Jeffrey Hendel  
SESD ASB Chemist

**THRU:** Marilyn Maycock, Chief  
Office of Quality Assurance

**TO:** Scott Miller

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the associated contract Statement Of Work (SOW). In general, project data quality objectives have not been used to evaluate these data prior to release by the Office of Quality Assurance. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report.

Analyses Included in this report:

**Report Narrative** for Work Order C143904, Project: 14-0430

Site Name: Cabot Carbon/Koppers, Gainesville, FL

CLP Case No. 44642, ELEMENT Sample Nos. C143904-01 through C143904-21  
C143905-01 (PES only)

Organic Analysis: KAP Technologies, Inc., The Woodlands, TX

The ESAT Work Team reviewed data for twenty-one (21) water samples analyzed for Semi-Volatile Extractable Organic Compounds per CLP Statement of Work SOM01.2. The samples were collected between 08/26/14 through 08/28/14, and were received by the laboratory between 08/28/14 through 09/02/14. The final data package was received on 09/23/14 by the USEPA Quality Assurance Section, Region 4 SESD/MTSB. The analytical results were reported in one sample delivery group (SDG) by the laboratory. In addition to the field samples, the laboratory also analyzed one performance evaluation sample (PES) for evaluating the laboratory's performance with using the methods.

The laboratory satisfied all contractual and technical holding time limits except for the re-extractions performed for samples C143904-09, 10, and 12. These re-extractions were required since more than four deuterated monitoring compounds (DMCs) were outside the QC acceptance limits in the original extractions. Similar recoveries and results reported in both sets may be indicative of sample matrix effects. Data qualification was not performed on this basis since the original data was used. A Stage 4 validation consisting of an electronic/manual review (S4VEM) was performed on the organic samples submitted for this case. The data package presents acceptable technical performance with qualifications.

All results associated with erratic initial and/or continuing calibration performance were “J” flagged with the appropriate Element qualifier (CLP16 and/or QC-1). Deuterated monitoring compounds (DMC) are used as surrogates in each sample for GC/MS analysis to monitor extraction efficiency.

Data quality factors requiring qualification of results are discussed below:

The laboratory encountered poor instrument responses in the initial and continuing calibration standards for the compound Atrazine. For the samples C143904-01 – 15 and 17 – 21, the Atrazine results were non-detects and were qualified “UR” (CLP17, CLP32).

The laboratory encountered poor instrument responses for 2,4-Dinitrophenol for some of the initial calibration standards analyzed for this Case. For the sample C143904-16 the 2,4-Dinitrophenol result was non-detected and qualified “UR” (CLP17).

The percent recoveries of DMCs were greater than the upper quality control limit established in the method for samples C143904-06, 10, 11, 13, and 19. Any positive results associated with an out of control DMC were qualified “J” (QS-5).

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

Region 4 Science and Ecosystem Support Division

980 College Station Road, Athens, Georgia 30605-2700

D.A.R.T. Id: 14-0429

Project: 14-0430, Cabot Carbon/Koppers - Reported by Jeffrey Hendel

The percent recoveries of DMCs were less than the lower quality control limit established in the method for samples C143904-08, 10, 11, 18, and 19. Any compound associated with an out of control DMC were qualified "J" (QS-3).

The laboratory reported internal standard area counts less than the lower quality control limit established by the method for samples C143904-09, 10, 11, and 12. Any compound associated with an out of control internal standard were qualified "J" (QI-1).

The percent recoveries of the DMC 4-Chloroaniline-d4 were within the quality control limit established in the method and less than 10% in samples C143904-10, 13, 18, and 19. The compounds associated with this DMC; 4-Chloroaniline; Hexachlorocyclopentadiene; and 3,3'-Dichlorobenzidine were qualified "J" (QS-4).

The percent recoveries of the DMC 4,6-Dinitro-2-methylphenol-d2 was less than the lower quality control limit and less than 10% for samples C143904-10 and 11. The results for 4,6-Dinitro-2-methylphenol were non-detects and qualified "UR" (QS-4) in both samples.

The laboratory identified 4-Nitrophenol in sample C143904-14 as a positive result. Upon review of the mass spectra of 4-Nitrophenol against the reference spectra, the spectra did not match and did not meet the requirements of the Statement of Work (SOW). The result for 4-Nitrophenol in sample C143904-14 was reported as a non-detect.

DMCs are used as surrogates in each sample for GC/MS analysis to monitor extraction efficiency. Samples C143904-09, 12, and 14 had elevated sample extract volumes due to their oily nature. As a result, the reporting limits for these samples are elevated.

Due to courier error, the sample cooler containing samples C143904-02, 03, 04, 05, 06, 10, 11, and 12 was delayed and not received by the laboratory until 09/02/14, and contained a temperature of 26.0°C. Samples should be received by the laboratory at a temperature of ≤6.0 °C. All compounds for these samples were qualified "J" (T-4).

Data qualification factors are explained by the Region 4 - specific qualifier definitions which are included elsewhere in this report. Further details are provided in the complete data review report, which is on file in the Region 4 SESD Records Center.

D.A.R.T. Id: 14-0429

Project: 14-0430, Cabot Carbon/Koppers - Reported by Jeffrey Hendel

## DATA QUALIFIER DEFINITIONS

U	The analyte was not detected at or above the reporting limit.
CLP01	Concentration reported is less than the lowest standard on calibration curve
CLP15	TIC Results Reported as Identified by Lab - IDs Not Verified
CLP16	Initial Calibration Response Erratic
CLP17	Initial Calibration Relative Response Outside Method Control Limits
CLP32	Continuing Calibration Relative Response Outside Method Control Limits
J	The identification of the analyte is acceptable; the reported value is an estimate.
N	There is presumptive evidence that the analyte is present; the analyte is reported as a tentative identification.
NJ	Presumptive evidence that analyte is present; reported as a tentative identification with an estimated value.
QC-1	Analyte concentration low in continuing calibration verification standard
QI-1	Internal standard was outside of method control limits.
OS-3	Surrogate recovery is lower than established control limits.
OS-4	Surrogate recovery less than 10%
OS-5	Surrogate recovery is higher than established control limits
R	The presence or absence of the analyte can not be determined from the data due to severe quality control problems. The data are rejected and considered unusable.
T-4	Samples received at ambient temperature.

## ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service  Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ( <a href="http://www.epa.gov/srs">www.epa.gov/srs</a> ), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.
