**Subject:** RE: Sentinel Well Workplan Gainesville Site- DEP review

Scott-

DEP has reviewed the Koppers work plans for the sentinel wells. It was unclear in the proposal whether or not the Westbay system was to be used in the multi-zone screen construction proposed for the offsite wells. While these wells are being installed in an area that is likely unaffected by Koppers facility contamination, it is critical that well construction ensure that representative samples are obtained from each of the screen intervals.

Therefore, Westbay construction or similar should be used to provide that assurance.

Thank you for the opportunity to comment.

Subject: Fw: Sentinel Well Workplan Gainesville Site

Greetings, All,  
Thank you all for your recent contributions on Koppers Site workplans. I understand from GeoTrans that they are prepared to begin sentinel well installation in the next few weeks. Are there comments or concerns related

to the sentinel well workplan that we need to be discussing with GeoTrans/Beazer related to this workplan? Please provide any comments that you may have in the next week.

Thank you,

RE: Sentinel Well Workplan  
Gainesville Site

Attached to this email is the report entitled "Upper Floridan Aquifer Sentinel Monitoring Well Installation Work Plan, Koppers Inc. Site, Revision 1, Gainesville, Florida." Minor modifications were incorporated into Figures 4, 5 and 6 to more clearly represent the proposed sentinel well program; however, no changes were made to the text. Please replace the May 20, 2008 workplan with this revised June 10, 2008 workplan. Jim

Subject: Sentinel Well Workplan Gainesville Site

Scott, attached to this email is the workplan for the proposed installation of 4 new sentinel wells located to the north of the Gainesville KI site. The locations and depths of the wells are consistent with our previous discussions over the past few months concerning these wells. Beazer is prepared to mobilize a drilling contractor once we receive concurrence from you to proceed. Jim
