Scott-

Enclosed are review comments from UF regarding the January 13, 2012 revised proposal for Additional Offsite Soil Sampling at the Koppers site. Based on the monthly site conference call on January 17, DEP understands that sampling was to be completed in late January. Previous November 29, 2011 comments from DEP contained recommendations for additional contaminant delineation that, if not included in this mobilization, could be included in design sampling to complete determination of excavation cut lines for the offsite soil removal. DEP requests that those previous comments and the attached review comments from UF be considered and incorporated in future sampling and design plans for remediation of offsite soil contamination at Koppers.

We look forward to implementation of the offsite remedy.

Kelsey
