Scott Miller
Remedial Project Manager
Superfund Remedial Branch, Section C
U.S. Environmental Protection Agency, Region 4
61 Forsyth Street SW

Subject: August 2015 Monthly Progress Report

Dear Mr. Miller:

On behalf of Beazer East, Inc. (Beazer), attached is the August 2015 Monthly Progress Report for the Koppers portion of the Cabot/Koppers Superfund Site in Gainesville, Florida. If you have any questions or comments, please contact me.

Sincerely,

Gregory W. Council, P.E.

Principal Engineer

# August 2015 MONTHLY PROGRESS REPORT Cabot/Koppers Superfund Site Gainesville, Florida

#### 1. Compliance Actions:

- Beazer's Operation and Maintenance (O&M) Contractor performed routine treatment plant O&M services for the groundwater extraction and pretreatment system.
- Remedial Design and Remedial Action activities are presently being conducted.

#### 2. Sampling/Test Results and Data:

- Instantaneous flow rates and totalizer volumes were measured in each extraction well.
- Note that ISGS injections affect the NAPL recovery amounts presented below. See Section 3 and Tables 1 and 2.
- The bi-weekly passive NAPL recovery program continues at Upper Hawthorn monitoring wells: 0.75 gallons of NAPL were removed from Upper Hawthorn wells during the past month (2 recovery events). Note that no recovery was conducted at HG-11S and HD-15S due to the ISGS operations. A total of 598.11 gallons have been removed since the start of the NAPL recovery program on June 19, 2004. Table 1 provides details of the NAPL recovery volumes by well and date.
- In addition, NAPL was removed from 3 temporary injection points (TIPs) installed in the Former Process Area as part of the In-Situ Geochemical Stabilization (ISGS) program (Table 2). Two NAPL recovery events were conducted during the month, resulting in a total of 3.7 gallons removed. Note that NAPL was not collected from most TIPs due to ISGS operations.
- NAPL was not removed from five Upper Hawthorn recovery wells installed in the Former Process
  Area as part of the ISGS program due to the active ISGS operations.
- A total of 3,625,545 gallons of groundwater were recovered by the Surficial Aquifer drains and extraction well system (both Surficial Aquifer and UFA) during the past month (system run time of 740 hours). The average recovery rate for the month was approximately 81.66 gallons per minute (gpm). The recovery for each component is listed below.
  - Surficial Aquifer
    - Perimeter Extraction Wells: 609,237 gallons
    - Former North Lagoon Drain: 406,300 gallons
    - Former Drip Track Drain: 480,330 gallons
    - Former Process Area Drain: 0 gallons (Inactive due to ISGS operations)
    - Former South Lagoon Drain: 412,100 gallons
  - Upper Floridan Extraction Wells
    - FW-6: 28,584 gallons
    - FW-21B: 200,667 gallons
    - FW-31BE: 984,050 gallons
    - FW-32BE: 504,277 gallons

Approximately 366.8 million gallons have been recovered from the Surficial Aquifer extraction wells and four drains since the start of the Surficial Aquifer containment system in January 1995.

For the month, the total volume of water treated and discharged to the GRU wastewater system was 1,967,000 gallons. The remaining portion of the water, from Upper Floridan Aquifer wells, was treated and used for on-Property irrigation.

The Former South Lagoon groundwater drain pumps were turned off for approximately 4 hours to pump and clean clarifiers and to treat backwash water. The system was down for 4 hrs on Aug 31, 2015 due to electrical breaker trip and the Process Area pumps were turned off on July 13, 2015 at the start of the ISGS injection.

#### 3. Plans, Reports, Deliverables and Procedures Completed:

- ISGS injection started on July 9, 2015.
- UIC Sampling on Aug 19, 2015.
- Third quarter sampling event: August 16 21, 2015.
- Remedial Design/Remedial Action Status Update Meeting (EPA/Beazer) Aug 27, 2015.
- Pre-Design Investigation Work Plan: Design Track 2 (Version 2) submitted on Aug 25, 2015.
- Quality Assurance Project Plan for the Comprehensive Groundwater Monitoring Plan at Cabot Carbon/Koppers Superfund Site (Former Koppers Facility) Gainesville, Florida (Rev 1) was submitted on Aug 27, 2015.
- Periodic maintenance checks and inspections.
- Treatment-plant component maintenance and repair as needed (caustic pump, carbon vessel gaskets and gauges, sludge pump diverter valve, bag filter vessel).
- Rebuilt transfer pump.
- Cleaned flow meters.
- Repaired/Replaced EW-1 and EW-3 pump, motor, and flow meter chambers.
- Installed new EW-11 pump and flush lines.
- Replaced EW-3 pump head.
- Rewired EW-14 pump.
- Replaced Drip Track remote reader.
- Installed new transfer pump.
- Irrigation Breakthrough and TSE sampling on Aug 4, 2015.
- On-property irrigation using treated groundwater from FW-6, FW-21B, FW-31BE, and FW-32BE.

#### 4. Upcoming Actions:

- Design Track 2 pre-design investigation field tasks beginning September 28, 2015.
- NAPL collection at Upper Hawthorn monitoring wells: bi-weekly, except in ISGS areas.
- NAPL collection at temporary Upper Hawthorn ISGS injection points: bi-weekly, with modifications during ISGS injections.
- Routine inspection, operation, maintenance, and monitoring.
- Third quarter sampling event: November 30 December 4, 2015.

#### 5. Schedule Status:

The current remedial design schedule is attached.

### 6. Plan/Schedule Modifications:

• Minor modifications were made to the project schedule.

# 7. Community Involvement:

• Future community involvement activities will be coordinated with EPA.
