Subject: Koppers- DEP Comments on Upper FLA Extraction Well FW-31BE Performance Monitoring Workplan

Scott-

DEP has reviewed the referenced work plan and finds it satisfactory. We have also reviewed the GRU review comments and support their recommendation to use additional monitoring wells to better determine the effective radius of influence of Extraction Well FW-31BE.

Please note that if analytes are detected below the PQL, these concentrations should be reported, particularly if the detected concentration is approaching or above the GCTL.

Thank you for the opportunity to comment.
